Problem Statement

Photographers need expensive cameras for single shoots — buying is too costly.

No simple website exists to browse and book photography gear online.

Calculating daily/weekly rates, deposits, and insurance manually is complicated.

Our Solution

`catalog.html`

Shows 13 cameras with photos, specs & daily prices

`booking.html`

Form to select gear, pick dates & check availability

`script.js`

Calculates the total bill automatically in real time

`style.css`

Makes the website look clean with a dark-gold design

Working - Method / Mind Map

1**Browse**

User opens catalog.html and
sees 13 cameras

2**Book**

Clicks Rent Now → fills the
booking form

3**Pay**

Script calculates total cost
instantly

4**Done**

User sees full bill and
confirms booking

Conclusion

Working Website

Two pages — catalog + booking — fully functional

Smart Pricing

Auto-calculates bill with discounts, deposit & insurance

Good Design

Dark-gold theme, animations, works on all screen sizes
