1. Introduction to the Case Study :

The rapid growth of photography and digital content creation has increased the demand for professional camera equipment. However, purchasing high-end cameras and lenses is expensive for beginners, students, and freelance photographers.

GearLease is a web-based rental platform designed to allow users to rent professional photography equipment such as cameras and lenses. The system provides an easy interface where users can browse equipment, check availability, and book items for a selected duration.

The application is built using HTML, CSS, and JavaScript, making it lightweight and easy to deploy. It demonstrates the implementation of a simple rental service system with booking functionality and pricing logic.

2. Problem Statement / Case Background (Abstract) :

Professional photography equipment such as DSLR cameras and lenses are expensive and not always required permanently by users. Many photographers only need them for short-term projects, events, or learning purposes.

The challenge is to design a simple web application that:

- Displays a catalog of available equipment.
- Allows users to check availability using a booking calendar.
- Calculates rental cost depending on the duration.
- Includes a damage deposit calculation to protect equipment owners.

This case study proposes **GearLease**, a photography equipment rental system that simplifies equipment booking through a web interface.

3. Problem Statement/Case Study Design :

The GearLease system consists of two primary web pages:

1. Catalog Page (catalog.html)

Displays the list of available equipment including:

- Camera models
- Lens mount types
- Megapixel count
- Rental price per day/week
- Equipment image preview

Users can browse through different photography equipment and select the item they want to rent.

2. Booking Page (booking.html)

This page allows users to:

- Select equipment
- Choose rental start and end dates
- Calculate rental price
- View damage deposit
- Confirm booking

The booking page ensures users know the final rental cost before confirming the reservation.

4. Methods & Algorithms Technology Applied in the Problem Statement / Case Study :

The GearLease system is developed using basic web technologies to create a simple and interactive rental platform.

HTML :

- Used to create the basic structure of the website.
- Builds the equipment catalog page (`catalog.html`) to display cameras and lenses.
- Creates the booking page (`booking.html`) with input forms for rental details.
- Includes form elements like dropdowns, date inputs, and buttons for user interaction.

CSS :

- Used to design and style the user interface.
- Arranges equipment items in card or grid layouts.
- Adds image zoom overlay effects for better product viewing.
- Improves visual appearance using colors, spacing, and responsive design.

JavaScript :

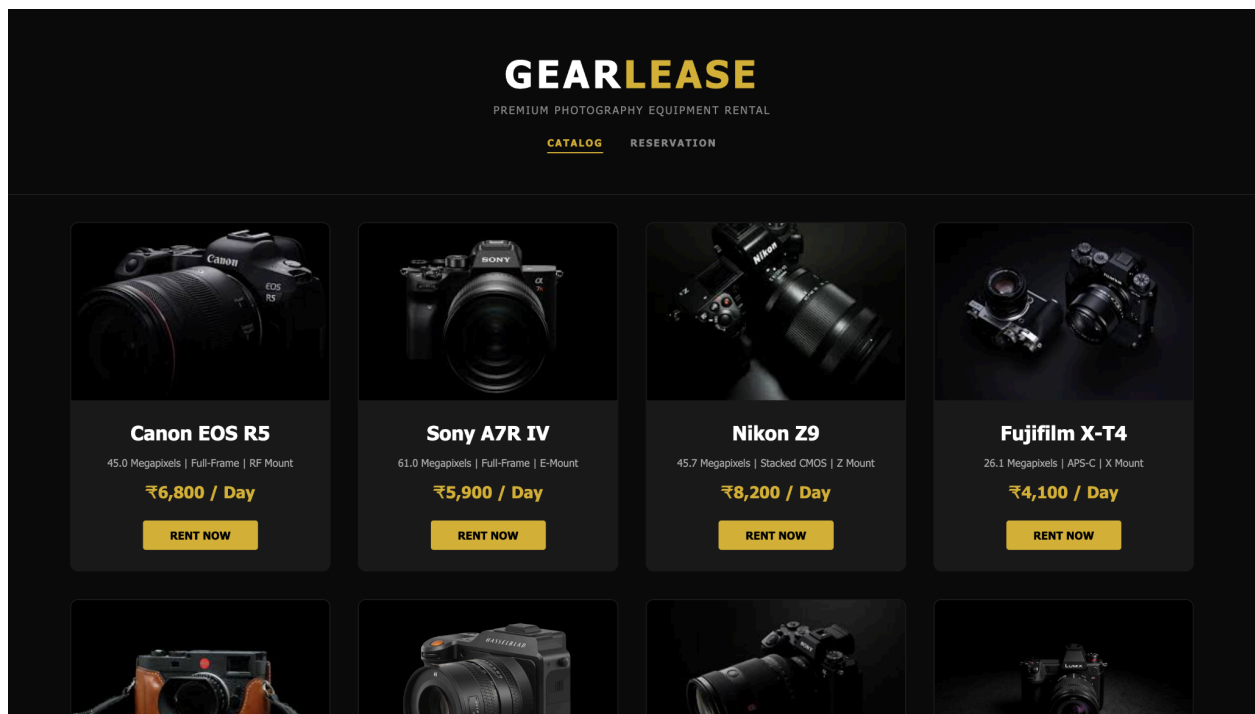

- Adds interactive functionality to the website.
- Calculates rental price based on the selected duration.
- Implements damage deposit calculation logic.
- Performs availability checks for selected rental dates.
- Updates the total cost dynamically when users change booking details.

These technologies work together to create a responsive and user-friendly photography equipment rental system.

5. Problem Statement / Case Study Implementation Details and Snapshots :

OUTPUT :

In this webpage , first the user will get the options

GEARLEASE

PREMIUM PHOTOGRAPHY EQUIPMENT RENTAL

CATALOGRESERVATION

RESERVATION

SELECT GEAR

Canon EOS R5 (₹6,800/day)

DAYS TO RENT

1

* Rent for 7+ days to get a 15% Weekly Discount!

PICKUP DATE

dd/mm/yyyy

Base Rental:₹6,800.00

Mandatory Insurance:₹2,300.00

Damage Deposit (30%):₹2,040.00

Total Estimate:₹11,140.00

CONFIRM BOOKING

Then the user will go in the reservations part and can select the camera of their choice and can type on which date and day the user want.

GEARLEASE

PREMIUM PHOTOGRAPHY EQUIPMENT RENTAL

CATALOGRESERVATION

RESERVATION

SELECT GEAR

Canon EOS R5 (₹6,800/day)

DAYS TO RENT

7

* Rent for 7+ days to get a 15% Weekly Discount!

PICKUP DATE

12/03/2026

AVAILABLE

Base Rental:₹47,600.00

Weekly Discount (15%):-₹7,140.00

Mandatory Insurance:₹2,300.00

Damage Deposit (30%):₹12,138.00

Total Estimate:₹54,898.00

CONFIRM BOOKING

After selecting the camera, date, day then the user will get the total estimation for it & finally the user's camera will be rented.

6. Case Study Results and Conclusion :

Results :

- The GearLease website successfully displays photography equipment through the catalog page.
- Users can select equipment and choose rental dates through the booking page.
- The system correctly calculates the rental price and damage deposit.
- JavaScript functions enable basic interaction and availability checking.

Conclusion :

The GearLease project demonstrates how basic web technologies like HTML, CSS, and JavaScript can be used to build a simple equipment rental platform. The system provides a user-friendly interface for browsing and booking photography equipment. Future improvements may include adding a database, user login system, and online payment integration to make the platform more advanced and practical.
